

Client Requirements

- Hardware: 2 GHz Dual core processor or higher (recommended), 2Gb RAM or higher (recommended).
- OS : MS Windows XP Professional SP3 or higher
- When online – TCP port 80/443 connection to the web server (service) via any route, 64Kbit bandwidth or higher recommended
- .NET Framework 3.5 SP1 installed – co-exists with any other .NET framework on system

Server Requirements (Web and Database)

- Dual-CPU 3GHz Intel Xeon or equivalent central processing unit(s)
- 2GB Memory (ECC preferred)
- Adequate hard disks – RAID fault tolerance of levels 1 or 5 recommended (see notes)
- Separate systems are recommended for increased fault tolerance, disaster recovery, and loading
- Windows 2000 Server / 2003 (Web/Full depending on intended use) / 2008 server required
- SQL 2000/2005/2008 required

Notes to overview

- MKInsight directly follows the three-tier architecture model (presentation (client), logic (IIS), data (SQL Server))
- Software is proven to work in Citrix environments (using Citrix presentation client) alongside or instead of a 'fat client' installation, using a wizard-style installer
- VPNs and token authentication schemes are not specifically required. Software can run in a default mode requiring username and password combination (held internally by MKInsight), or using Active Directory.
- Minimum Hard Disk requirements (in addition to the OS requirements): Database server 50Gb – Web server 40Gb
